

Morrison Vertical Denester

INDUSTRY: FOOD **CONTAINER:** OLIVE CUPS

Customer Container Handling Challenge:

Our customer came to us needing us to prototype a single cup denesting station for their single serve olive cups.

Morrison Solution:

Our container handling experts love a prototyping project. For this system, we designed a prototype single cup denesting station. This station is equipped with a vertical denester that accepts stacks of olive cups and denests them into the chute below. This prototype is servo driven to mimic an indexing motion.

Construction: Stainless Steel
