

Improve Safety In Your Production With Morrison Auto Adjust Rails®

WHAT ARE MORRISON AUTO ADJUST RAILS®

Morrison Auto Adjust Rails® are designed to suit your needs for rapid conveyor rail changeover solutions on the same production line. This system is user friendly, easy to retrofit, and will work for current and future containers. Accurate positioning within 1mm, infinite adjustability are just a few of the possibilities Auto Adjust Rails® bring to your line. Cut down on changeover time and make changeovers virtually maintenance free, all with the push of a button.

Great for

- Packaging Lines Including Retrofits
- Case conveyor
- Empty or Filled Containers
- Empty or Filled Cases

Feet Stay On The Ground

You have been running the same container size all day, but now it's time for a changeover. Your maintenance team has to climb to dangerous heights to complete this task. What if this could be done all by the push of a button? By installing Morrison Auto Adjust Rails® you are investing in a cost-effective and safer option to run more than one container on the same line. Put the safety of your team at the forefront and help keep your maintenance team on the ground.

Eliminate Pinch Points

We know accidents can happen, help take the unknown out of the equation. By installing Auto Adjust Rails® you are eliminating the "pinch points", or where the brackets meet. Help reduce the opportunity for injury, your team and their fingers will thank you later.

Reduce Human Error

Our system helps eliminate human error by safely extending and retracting by metering air in and out of the positioner. This allows for maintenance free operation. For optimal container handling, automating this task helps for a reliable and precise changeover every time.
