

PRODUCT GUIDE

Down Bottle Reject Systems

THE PRODUCT

With Morrison's Down Bottle Reject System, you have a cost effective system that can help to increase your ROI and line efficiency, while allowing you to shift your workforce to other places that matter.

HIGHLIGHTS

- ✓ Mechanical system solely relies on rail setup with no added operating costs
- ✓ Minimize jams due to down bottles on your production line
- ✓ Reduce downtime and wasted product down bottles create
- ✓ Mechanical and pneumatic models are available depending on geometry of the bottle

BENEFITS

REDUCE INEFFICIENCIES

There are many times that companies have inefficiencies due to containers falling over. Instead of having a person standing on the line looking for down containers, it's more cost effective and efficient to implement a down bottle reject.

SIMPLE

The mechanical system operates on your line with no additional operating costs. Since it relies on bottle geometry, you will need no air, pneumatics, or motor to utilize the technology.

INCREASE UPTIME

With reducing your down bottles, you naturally can increase uptime in your production and throughput of product by reducing jams on the line.
